Example conditions include connections to a water main larger than 8 inch, connection to a main located deeper than 5 feet below surface, installation in concrete, pavement, or rock.
- (2) The District will add to the basic hydrant installation fee any estimated costs related to encroachment permits including associated inspection charges as well as those costs related to any required right of ways.

SCHEDULE 8-B EFFECTIVE JANUARY 1, 2014

PRIVATE FIRE SERVICE - INSTALLATION CHARGES 1/

The District will estimate all installation costs not associated with the vault and add this amount to the vault costs indicated below. The final cost to the applicant will be the summation of these two installation costs.

VAULT INSTALLATION 2/

SIZE	DETECTOR CHECK	DOUBLE DETECTOR CHECK
2"	\$ N/A	\$ N/A

1/ Vault installation includes all piping and appurtenances located within the vault, as well as the meter box.

Any condition which, in the opinion of the District, will result in an estimated vault installation cost of more than twenty five percent above those charges shown in this schedule will be installed on an estimated cost basis.

Installations requiring a road boring and jacking will be completed on a time and material basis. A deposit, based on the District's anticipated maximum cost will be due from the applicant prior to installation. The final cost to the applicant will not exceed the deposit.

2/ A detector check is installed unless backflow protection is required, as discussed in Section 9 of the Regulations. A double detector check is installed where backflow protection is needed.

The District will add to the basic vault installation fee any estimated costs related to encroachment permits including associated inspection charges as well as those related to any required right of ways.

NOTE:

A \$100.00 fee will be collected at the time an application for a private fire service is submitted to the District. This fee will compensate the District for time spent in estimating the installation cost. The fee will be waived if applicant, pursuant to section 8.05.02 of these Regulations, utilizes a private contractor to install the service and does not request an estimate.

DECLIIDEMENTS

BACKFLOW PREVENTION REQUIREMENTS

Minimum requirements for backflow prevention devices for various types of potable water users are listed below. These requirements have been determined based on District and industry-wide experience of the probability of backflow occurring, taking into consideration such factors as the degree of hazard and complexity of piping associated with various types of District water customers.

The District reserves the right to install a more stringent device than listed if, in its sole judgement, the particular circumstances of that water user requires a higher degree of backflow protection. All meters serving the same parcel will be subject to the highest degree of backflow protection appropriate for that parcel. The District will determine the need for and the type of device for all classes of services not listed below.

Water User Fees - Residential & Commercial Users: effective September 1st, 2013

www.ccwd.org

Bi-Monthly Water Base Rate & Consumption Charges Calculated as follows:

Water Base Rate x Capacity Multiple + Consumption over bi-monthly 1000 cubic foot allowable

Base Bi-Monthly Water User Fee:
(incl. 1000 c.f. per billing)
\$98.76

Tiered Bi-Monthly	Water Usage Fees
1,001 - 6,000 cf	\$1.25 / 100 cf
6001 – 12,000 cf	\$1.56 / 100 cf
Over 12,000 cf	\$2.00 / 100 cf

Capacity Multiple				
Meter Size	Multiple			
5/8" (Standard Residence Size)	1			
3/4"	1.5			
1"	2.5			
1.5"	5			
2"	8			
3"	16			
4"	25			
6"	50			

Water Measurement Conversion - Cubic Feet to Gallons:

- -100 c.f. = 748 gals.
- -Customers receive 7,480 gals with the base rate.
- -Consumption over the allotted amount in a billing period is charged at the above tiered rates.

Example: A Standard 5/8" Residence meter using 1,250 c.f over 2 months would be charged a total of \$101.88. (5/8" Meter Water Base Rate = $$98.76 \times 1$) + \$3.12 (250 c.f. additional Consumption Charges = $250 / 100 \times 1.25)

Note: The average single-famiy residence with 3 full time occupants uses roughly 13,500 gals every 60 days. (or 1,805 c.f. per billing cycle) resulting in \$10.06 worth of added consumption charges. Capacity Multiple is also applied to the tiers. (e.g. Multiple is 2.5 for 1" meter. Base rate includes 2,500 cf, tier 1 would be 2,501 to 15,000 cf, tier 2 would be 15,001 to 30,000 cf and tier 3 would be over 30,000 cf)

Wastewater User Fees: effective September 1st, 2013

Bi-Monthly Wastewater User Fees
per Single Family Dwelling and Equivalent Unit
\$155.26

Residential Users: Each Single Family Dwelling is charged 1 x the bi-monthly sewer rate. **Example:** A Duplex would be charged: $$155.26 \times 2 = 310.52

Commercial Users: Commercial Customers are charged a Multiple of the Wastewater Rate x Single Family Dwelling Equivalent Units (sfdeu's). (A SFDEU is defined as an amount of sewage equal to 195 gallons per day (gpd) per unit). **Example:** A Deli creating 400 gpd of sewage would be equivalent to 2.05 sfdeu's and would be charged: \$ 155.26 x 2.05 = \$318.28.

Note: Commercial accounts are reviewed annually and wastewater multiple adjusted according to the amount of water used the prior year OR in the event of a change of use occurs on the property which results in additional use of sewer facilities. The bi-monthly sewer charge for Commercial Users is at a minimum 1 sfdeu for each unit or business of a multi-commercial complex.

- -Customers are billed every two months in arrears.
- -The Payment Due Date is noted on your customer statement.
- -Reminder notices are mailed on the next business day following the statement due date and a \$10 late fee imposed.
- -No suspension of base minimum fees under normal circumstances (Res. No. 2008-36 & Res. No. 2010-78).

Disclaimer: Fees contained herewith were valid as of the effective date of this document and are subject to revisions by the CCWD Board of Directors.

DECLIIDEMENTS

BACKFLOW PREVENTION REQUIREMENTS

Minimum requirements for backflow prevention devices for various types of potable water users are listed below. These requirements have been determined based on District and industry-wide experience of the probability of backflow occurring, taking into consideration such factors as the degree of hazard and complexity of piping associated with various types of District water customers.

The District reserves the right to install a more stringent device than listed if, in its sole judgement, the particular circumstances of that water user requires a higher degree of backflow protection. All meters serving the same parcel will be subject to the highest degree of backflow protection appropriate for that parcel. The District will determine the need for and the type of device for all classes of services not listed below.

DECLIIDEMENTS

BACKFLOW PREVENTION REQUIREMENTS

Minimum requirements for backflow prevention devices for various types of potable water users are listed below. These requirements have been determined based on District and industry-wide experience of the probability of backflow occurring, taking into consideration such factors as the degree of hazard and complexity of piping associated with various types of District water customers.

The District reserves the right to install a more stringent device than listed if, in its sole judgement, the particular circumstances of that water user requires a higher degree of backflow protection. All meters serving the same parcel will be subject to the highest degree of backflow protection appropriate for that parcel. The District will determine the need for and the type of device for all classes of services not listed below.
