

Final Technical Report for Saratoga Horticulture Research Endowment on Project:  
"Propagation, Distribution, and Evaluation of Salt-tolerance in Shrubby Eucalypts for  
California"

Matt Ritter

February, 2012

The initial objective of the project was to create a database of all small, shrub eucalypts currently grown in California.

We have now created that database and it is available on the Cal Poly Plant Conservatory website at: <http://www.plantconservatory.calpoly.edu/Tree/eucindex.html>

The list represents and culmination of all the data collected after visiting, contacting, and surveying the following botanical gardens and arboreta to acquire their inventory of accessioned *Eucalyptus*:

1. Leaning Pine Arboretum and Cal Poly Campus, San Luis Obispo
2. Stanford Campus, Palo Alto
3. U.C. Santa Cruz Arboretum
4. U.C. Santa Barbara Campus
5. U.C. Davis Arboretum
6. Huntington Botanical Gardens, San Marino
7. Fullerton Arboretum
8. U.C. Los Angeles Arboretum
9. U.C. Berkeley Botanical Garden
10. Vasona Lake Max Watson Eucalyptus Grove, Los Gatos
11. San Diego (Quail) Botanical Garden
12. Ruth Bancroft Botanical Garden, Walnut Creek
13. U.C. Riverside Campus
14. Palomar College Arboretum, San Marcos
15. South Coast Botanical Garden, Palos Verdes

The database has valuable information in addition to where the species can be found, including the taxonomic relationships of all the species, their native range, and the species authority. This information will be invaluable as we progress towards future projects that involve introducing the best growing species of *Eucalyptus* to California.

The database will be publicized on the Cal Poly Plant Conservatory website and is available to the public in PDF and Excel formats.
